# Our Services

# Engineering Services

## Software Development

### Application

We offer following services under application development

- Application Development
- Re-engineering
- Application Maintenance
- Enterprise Solutions
- Database Management
- Ecommerce Portal

1

### Mobility

We offer comprehensive solutions on both Native and Hybrid app development

- App Architecture
- User Experience Service
- Development Service
- Native and Hybrid
- Real Time Tracking
- Solution for Industry

2

### Digital

Digital offerings are designed to touch all aspects of a digital transformation journey for an enterprise by using a combination of business

- Brand Identity
- Social Media Marketing
- Search Engine Optimization
- Search Engine Marketing

3

### BI & Analytics

- BI Strategy & Transform
- Business Analytics
- Analytics as a Service
- Big Data Platform
- Big Data Strategy
- Data Integration & Optimization

4

# Product Suite

## iWin

Flexible to define and execute various levels of draws and prizes. It is highly secured with data encryption implemented within the system. Ability to integrate with any external system. This is best suited for usage at banks (prizes based on deposits), shopping malls (coupon based prize draws) and all other lucky draw initiatives

## Vat On Wheels

It is Cloud based billing solution designed and configures for specific billing requirement. The application generates the invoice, and integrates with any VAT generation interfaces automatically on a click of a button and a formatted sale bill for the dealer. The bills and data can be imported in various formats.

## iPlan(ERP)

Designed to work across the countries with structured access management. Capable of handling various business and its transactions. Easy to manage inventory and capable of producing various business and operations reports. It is a complete Business management software typically a suite of integrated applications that an organization can use to collect, store, manage and interpret data from many business activities.

## Commodity Inventory System

This system will help islamic banks to maintain and carry out metal transactions with complete inventory and reporting. This system is equipped with complete audit trail of transactions and inventory management. Capable of integrating with any Core Banking System.

## iLoan

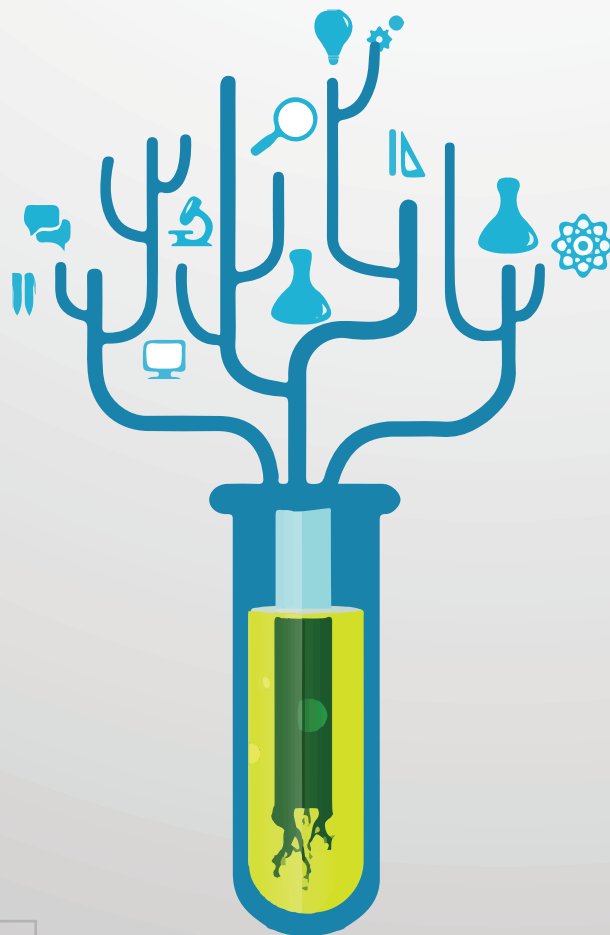

Web based application to calculate the eligibility of a finance for a customer. System is well structured to define different types of finance products. Eligibility parameters and rules for every product can be defined by the credit control department. Well defined escalation matrix with the multiple hierarchy level for approval. System will generate the required amortization schedules which can be shared with customers.

# Data Science

We at iPrimitus help and assist business successfully transform their traditional systems into sophisticated intelligent system with help of DATA SCIENCE.

The key to successful BI Transformation is to consider BI consolidation and address simplification, standardization and governance processes holistically with robust migration frameworks, tools and accelerators.

iPrimitus multitudes the data science expertise over decades in helping customers in identifying, consulting and solving underlying “decision management” problems. We not only assist customer to understand the risk of their BI landscape standardization and consolidation but also standardized the whole migration process through some well-defined frameworks and automated tools.

# Infrastructure Services

## Enterprise Implementation

- Strategic Network Consulting
- Server, Storage & Networking Hardware
- Migration
- Disaster recovery

1

## Cloud Practice

- Compute
- Storage & content Delivery
- Database
- Networking

2

## Information Security

- Network Security Strategic Consulting
- Vulnerability Assessment
- Penetration Testing
- Data Leakage Prevention
- Data Encryption
- End Point Security
- Antivirus & Firewall
- iCisap

3

## Managed Services

- Managed Hosting
- Colocation Services
- NOC (iNOC)
- SOC (iSOC)

4

## Service Desk

- Help desk (iHelp)
- 24/7/365 Service Desk

5

- Individuals and Interactions
- Working Software
- Customer Collaboration
- Responding to change

3

# Skill Sets

## Architecture

JWT, Redis, Node, Django

## Web

HTML5 / DHTML, Javascript, JQuery, Angular JS, JSON, AJAX, CakePHP, Codeigniter, Responsive Web Design

## LAMP

Linux, Python, MySQL, PHP

## Microsoft

Web Services / SOA / REST, Microsoft core Model-View-Controller, Razor views, C# / Visual Studio, LINQ, Entity SaaS

## Mobility

Android, Windows, iOS, Xamarin, Netbeans

## Testing

Jmeter, Junit, Mercury, Selenium, SoapUI

## J2EE

Java / Eclipse, Hibernate, JSP / Servlets / JSF

## CMS

Dot Net Nuke, Wordpress, Alfresco, Drupal, Joomla

# Skill Sets

## CRM

Microsoft Dynamics CRM, Sage

## Big Data

Hadoop, MongoDB, SAP, Hanna

## Database

Microsoft SQL Server, Oracle

## UI Designing

Infragistics, Kendo, Telerik

## e-Commerce

Magento, VevoCart, Shopify

## Cloud Platforms

Azure, AWS, Digital Ocean

## Analytics

Power BI, SSRS, Google Analytics, Qlick View, Flurry

## Project Mgmt

TFS, SmartSheet, MS Project, Jira, Rally

# Case Study – Data Science – Digitalization of Bank

## Problem Statement

Visibility of Consolidated Reports for all branches

- Too many products to manage and very difficult to maintain
- Tedious process to implement any change in policies
- Data spread across different banks in different formats

## Solutions

Built Common Platform and controlled customization

- Identified the Commonalities of Products Across Products.
- Identified the Solutions that were complicated and developed test cases for all the products with test results recorded for each product
- Identified the customization and most critical applications
- Developed a common platform as middleware to exchange the data across products/applications
- Developed framework which had the base product features and customization was made as plug ins for each application. Process for any customization was reviewed and deployed as add-ons

## Results

Increased Visibility of Business

- Ease to Maintain Products and Enhancements
- Implementation of BI was easy to see the performance of products across countries.
- Able to deploy products to multiple location was very fast
- Training team on new products was ease
- Spread across 32 countries in less than 2 years

## Technical Stack

- Products : Oracle, SAP, ASP.NET, Unix, Python
- Database: Oracle, MS SQL Server and Sybase
- DOT NET for Framework development and products
- Business Object XI 4.0 for BI

# Case Study – Parking System – Shopping Malls across Country

## Problem Statement

Tracking and Monitoring the Parking Areas

- Challenge was to monitor the Parking area across India. There was huge revenue loss reported due to malfunctions and dependencies on person

## Solutions

Central HUB to monitor parking activities

- Developed Application that was implemented in all the parking lots to manage the activities related to vehicles in and out through IOT.
- Implemented BI in Control Room to monitor the transactions online and revenue collected reports

## Results

700% Revenue Gain

- Solution was ease to implement and maintain
- Immediate visibility to Management if there was an attempt to change the process set

## Technical Stack

Microsoft Platform

- Database: MS SQL Server
- Frontend: ASP.NET MVC and Kendo UO

# Case Study – Health Emergency Services

## Problem Statement

Provide On-Time Service during Emergency

- There was challenge in providing a emergency service to needy on time as communication between different sources were not possible.
- Availability of emergency services such as Ambulances, Blood Banks were unknown or difficult to reach out to them in emergencies.

## Solutions

Real-time and Location Based Emergency Services

- Created a huge aggregator system to consolidate all service provider of emergencies like: Ambulance, Blood, Diagnostic Centers, Hospitals, etc..
- Built a complete echo system consisting of both Web Application and Mobile Application platform to provide services with minimum clicks and easy to avail services from the current location.
- Have Human touch to communicate the near families immediately
- Multiple and Easy option of payments

## Results

Efficient Performance in Emergencies

- Peoples Trust
- Automated workflows to escalate in case of emergencies
- Ease to monitor and follow-up on each case logged

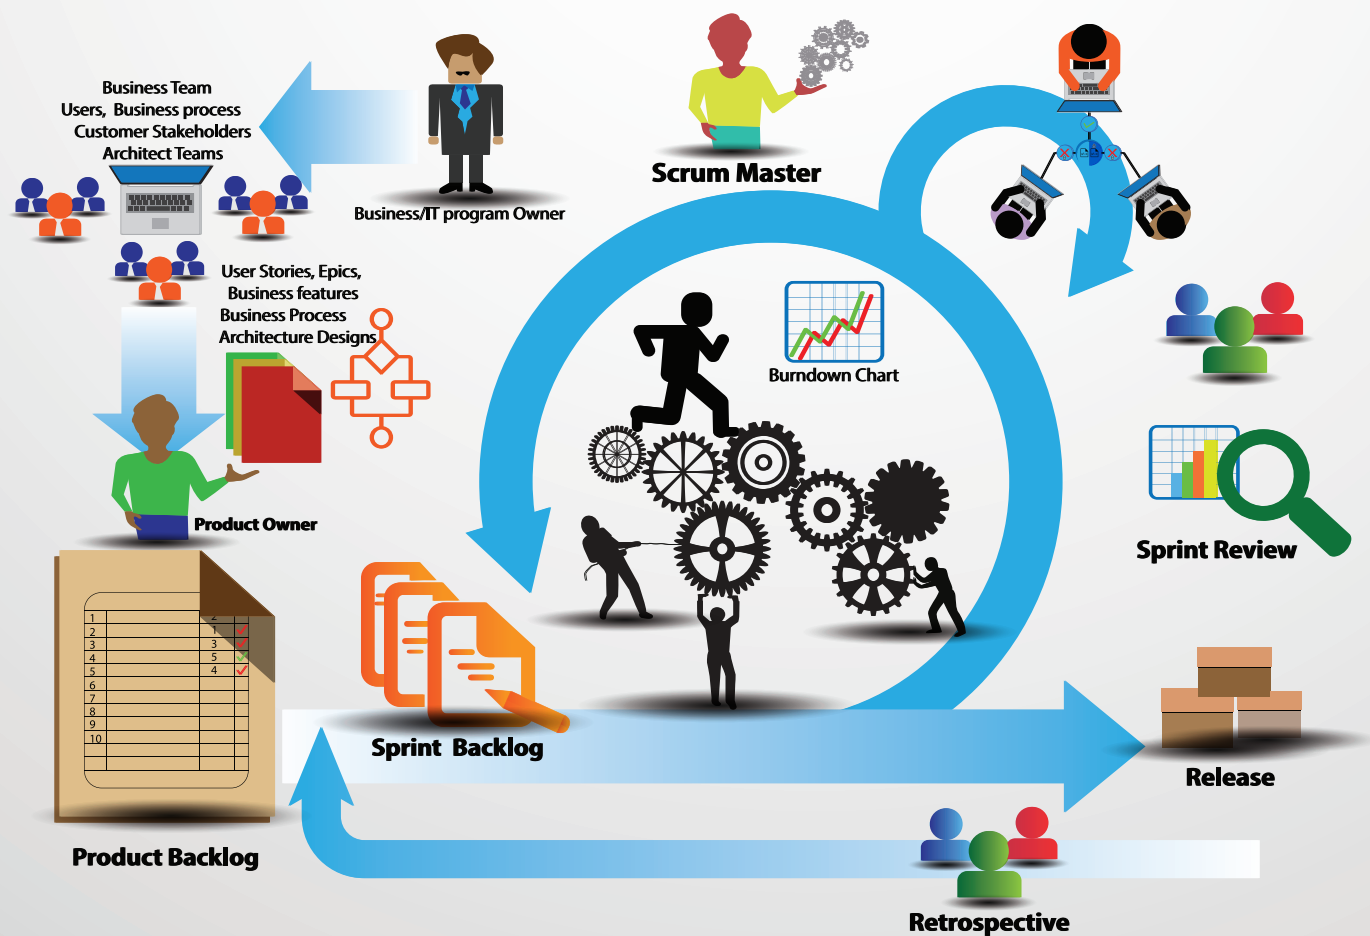

## Technical Stack

Robust Architecture

- Engine: Python, NodeJS, AngularJS,
- Live Tracking: Google Firebase
